

**Want a \$2000 Tax Credit on the
next home you Build?
Frostbusters makes it easier!**

If you already build energy-efficient homes that perform better than code, you may be able to qualify for a \$2000 Federal Tax Credit. Why not take credit for your hard work?

If you build conventional homes and wonder what changes you would need to make to qualify for the tax credit, Frostbusters can help with computer modeling that enables you to choose the most cost-effective energy improvements to help you meet the threshold.

Frostbusters can help you design and build homes that will qualify. We can provide the testing documentation required by the IRS.

Keep in mind that you need a client/buyer who is willing to pay a little more for their new home. Again, our computer modeling can be used to show you and your client/buyer projected mortgage payments and utility bills. The goal of course, is to reduce the utility bill by more than the increase in the mortgage, resulting in a positive cash flow.

An intermediate step might be to build an Energy Star Home first. This is easy by comparison, but will leave you better prepared to advance to the performance required for a tax credit on a future home.

We can help you attain Energy Star certification as well. Want to become an Energy Star Partner? That's easy... and free. We'll walk you through it.

Let's get started! Please call Frostbusters for an appointment or for additional information. We look forward to serving you!
